

JUNE 2014

Harrisonburg & Rockingham County Real Estate Market Report

FUNKHOUSER REAL ESTATE GROUP

Guiding you through every move

An analysis of real estate activity through May 31, 2014 provided courtesy of Scott P. Rogers, Funkhouser Real Estate Group

Executive Summary

The summary below is based on residential sales in Harrisonburg and Rockingham County as reflected in the HRAR MLS.

Pace of Home Sales: May

99 homes sold in May 2014, marking a 2% increase compared to May 2013 when 97 homes sold -- and a 29% increase compared to May 2012.

Home Values: May

Median sales prices declined 10% and average sales prices declined 6% when comparing May 2014 to May 2013.

Days on Market: May

The median time it took for a home to sell was 98 days in May 2014, a 20% decline from 123 days in May 2013 and a 24% decline from 129 days in May 2012.

Foreclosures

73 trustee deeds have been recorded in 2014 compared to 333 total home sales reported through the HRAR MLS during the same timeframe.

Inventory

Inventory levels increased in April 2014 to 679 residential properties currently for sale, up 6.3% from one year ago, and down 10% from two years ago.

Pace of Home Sales: Year To Date

333 homes sold thus far in 2014. This marks a 13% decline from the same time period in 2013 when 381 homes had sold, though an 11% increase over 2012 when only 301 homes sold.

Home Values: Year To Date

Median sales prices increased 1% though average sales prices decreased 2% when comparing 2014 YTD to 2013 YTD.

Days on Market: Year To Date

The median length of time on the market for homes selling thus far in 2014 is 138 days, an 8% decline compared to 2013, but and a 14% decline from 2013.

Supply

The under \$200k and under \$300K price ranges are balanced (6 - 8 months of supply) but all other price ranges still show an excess of housing supply.

Price Per Square Foot

Median price per square foot of single family homes has risen to \$107/sf in 2014, up from \$105/sf in 2013.

Buyer Activity

135 buyers committed to buy in May 2014, compared to 143 in May 2013 -- marking a 6% decline in buyer activity over the past year, though an 45% increase since 2012.

Single Family Home Sales

242 single family homes have sold thus far in 2014, compared to a total of 766 in 2013. The median sales price has declined to \$181,875.

Townhouse Sales

91 townhouses, duplexes and condos have sold thus far in 2014, compared to a 2013 total of 247 townhomes. The median sales price has increased to \$152,000 thus far in 2014.

Lot Sales

There have been 38 lot sales of less than an acre thus far in 2014, compared to 79 in all of 2013. Median sales prices have declined to \$53,450 thus far in 2014.

Land Sales

25 parcels of land greater than an acre have sold thus far in 2014 compared to 68 land sales during all of 2013. The median price per acre has declined to \$10,832.

HOME SALES REPORT

Harrisonburg & Rockingham County

June 7, 2014

# Home Sales	2011	2012	2013	2014	% Change ('13 - '14)
May	68	77	97	99	2.06%

Median Days on Market	2011	2012	2013	2014	% Change ('13 - '14)
May	164	129	123	98	-20.33%
Year-To-Date (Jan-May)	161	161	150	138	-8.00%

2013 was an encouraging year in the local housing market. After many years of a declining pace of home sales, we finally saw a (strong!) rebound in the home sales activity. Now, however, with five months of 2014 behind us, the pace of home sales has declined 13% year-over-year. This could be the result of the icy winter weather

in early 2014... but that is becoming a less likely theory as we move through Spring and still have a significant (13%) decline in year-over-year sales. In better news, however, May 2014 home sales (99) surpassed (just barely) May 2013 home sales (97), and median sales prices continue to stay relatively steady (+0.58%).

If we dig a bit deeper into the sales data, looking at how the City and County are performing individually, the first thing we notice is that there has certainly been a decline in (YTD) sales pace both in the City (-19%) and the County (-9%). Of interest, however, is that the median sales price is increasing (+10%) in the City, but

decreasing (-5%) in the County. These price trends are observed when comparing January through May sales data for 2013 and 2014. Similarly, it is now taking longer (+4%) for properties to sell in the County as compared to the City (-3%).

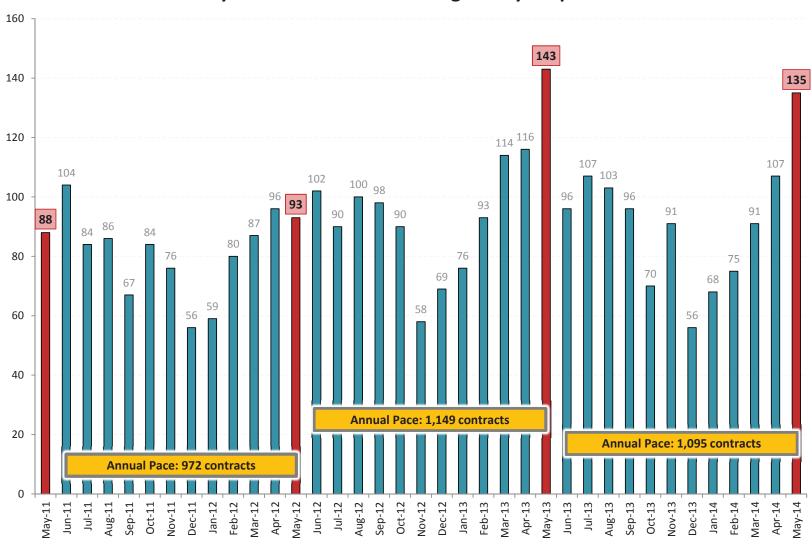

Month-By-Month Home Sales History

Many were hoping for a record-breaking month of sales in May to help this year's pace of sales start to catch back up with 2013 sales. Technically, we had that record-breaking month --- with 99 home sales in May 2014 being the highest month of May sales since at least 2011. That small gain (+2 sales) over May 2013, however, was

not enough to slingshot us ahead on a year-over-year basis. Perhaps we will make up some further ground in June? Home sales declined between May and June last year -- if we can pull of an increase in this metric, that would help the overall sales pace for 2014.

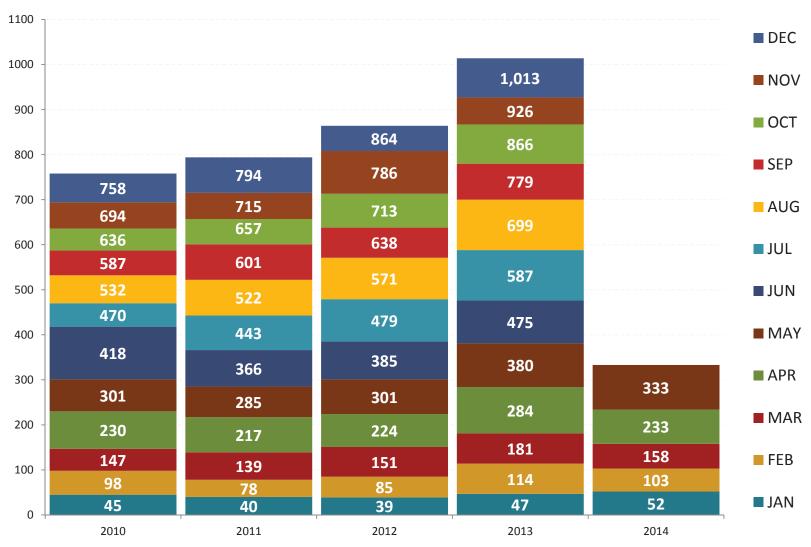

The pace at which buyers are signing contracts to buy real estate is often an excellent indicator of the future sales performance of our local market. It is encouraging to see strong month by month increases in contract activity since January of this year, though the year-over-year comparison does not fare as favorably. In the past

year, 1,095 buyers have signed contracts to purchase homes, whereas 1,149 (5% more) signed contracts during the previous 12 months. Also of note, the May 2014 contract pace (135 homes) was the second highest on record in the past three years --- but was not strong enough to surpass May 2013.

Monthly Cumulative Residential Sales

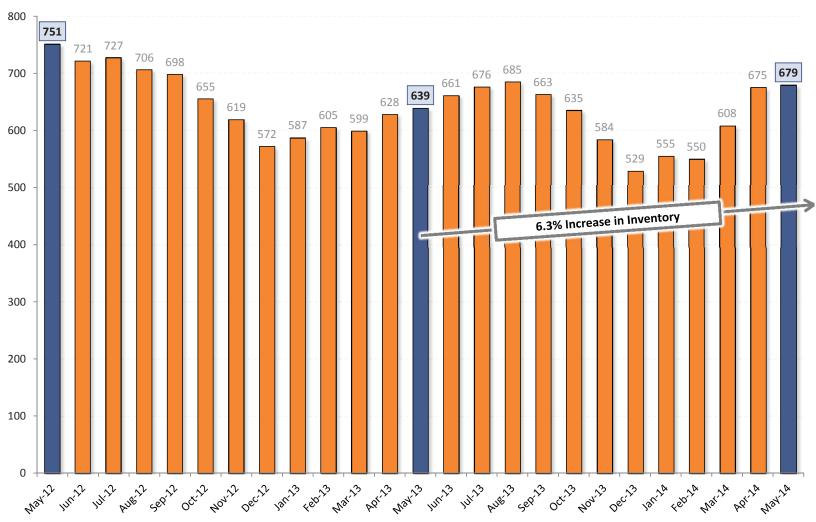

This pretty graph offers another way to look at the overall sales trends for the past few years in the Harrisonburg and Rockingham County housing market. To compare year-to-date figures, just look at how high the top of the brown segment of the bar chart extends. You'll note that this year's pace of home sales (333) is higher than

every year (2010, 2011, 2012) other than last year when there were 380 home sales. This is disappointing is many ways, as it seemed that 2013 had shown strong growth in our local housing market, and many were anticipating that 2014 would show a continuation of that trend.

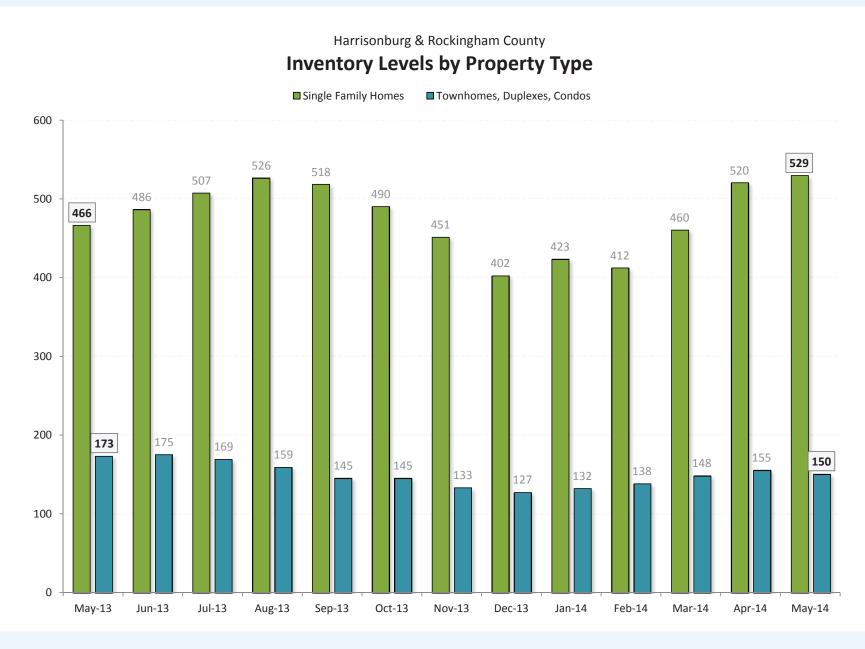

Inventory Levels

(end of month)

Overall sales activity is the combined effect of many would be home buyers deciding to make an offer on a particular home -- and those decisions are not typically taken lightly. In contrast, changes in inventory levels are the combined effect of many homeowners deciding to list their home for sale -- which be a big, significant,

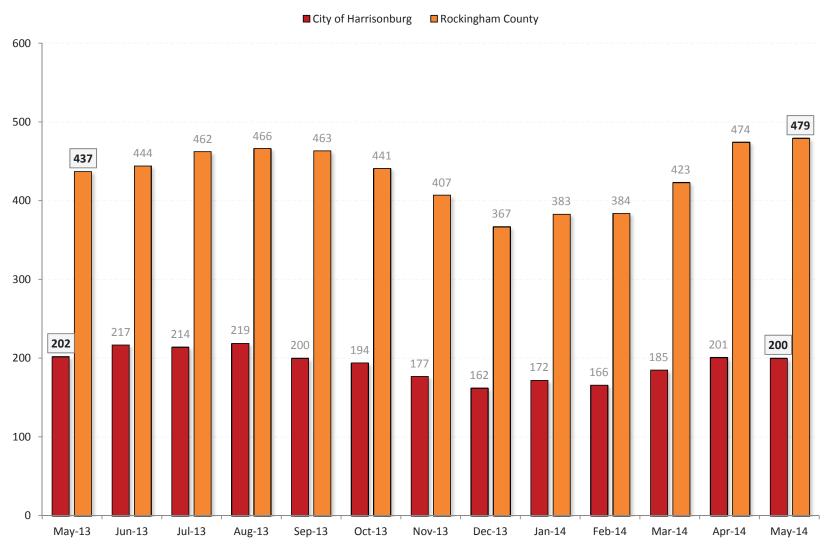

weighty decision, but it is not always so. Some homes that are on the market have been listed for sale by sellers who are "testing the market" and as a result, inventory levels can shift more quickly than home sales trends. We have certainly seen a significant increase in these inventory levels over the past several months.

If you're searching for a single family home, I have some good news for you --- you have more options now than you did a year ago. Inventory levels of single family homes have increased 14% over the past year - and most significantly over the past three months when we have seen a 28% increase in homes for sale. Townhouses

(plus duplexes and condos) are actually seeing a year over year decline (-13%) when looking at current inventory levels compared to a year ago at this time. This will be welcome news for my buyer clients seeking single family homes -- as well as for my seller clients hoping to sell their townhouses, duplexes and condos.

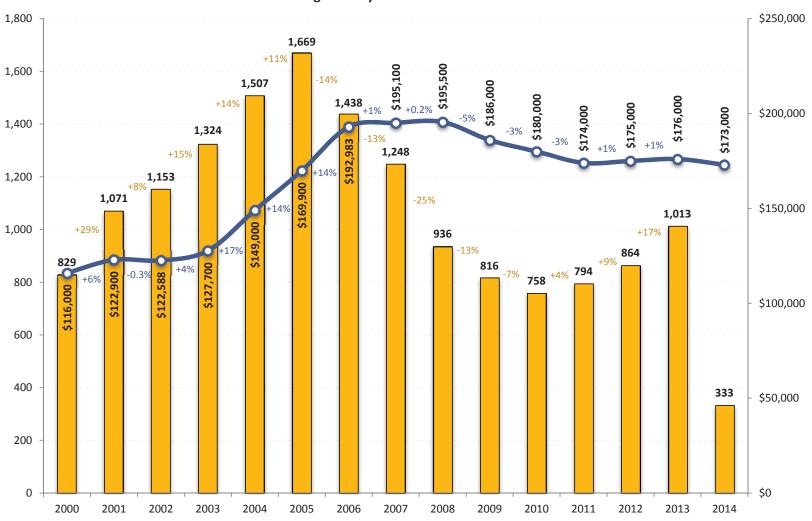

Trends in inventory level do not seem to transcend the City / County divide. When looking only at inventory leves in the City, we see that there has been a small decline (-1%) in the number of properties for sale. In the County, however, there has been an 8% increase in the number of homes for sale. I suppose this is good news for the

home buyer seeking a property in the County, though the many home sellers in the County likely are not enjoying the extra competition. Overall, the inventory levels in the County seem much more turbulent than in the City.

Home Sales & Price Trends

Single Family Homes & Townhomes

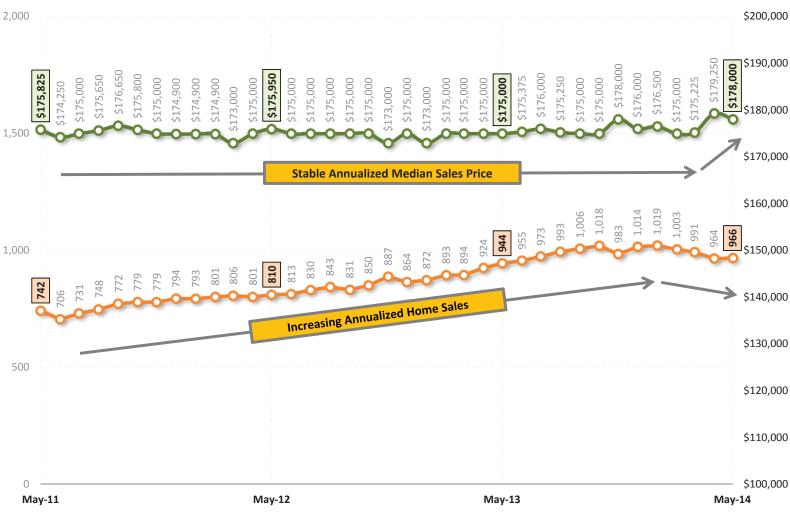

This graph provides an overall indicator of the state of our housing market, showing both the number of homes being sold each year since 2000 (yellow bars) as well as changes in the median sales price during the same time period (blue line). This past year (2013) marked the third year in a row with an increased pace of home sales --

showing 17% growth as compared to 4% and 9% in the previous years. As we know (page 3) the strong pace of home sales seen last year is not necessarily continuing this year, and we are also seeing a slight decline in median sales prices, although the graph above compared to different time frames for 2013 (12M) and 2014 (5M).

Time-Adjusted Home Sales Trends :: All Homes

Home Sales, Median Sales Price in each 12 Month Period

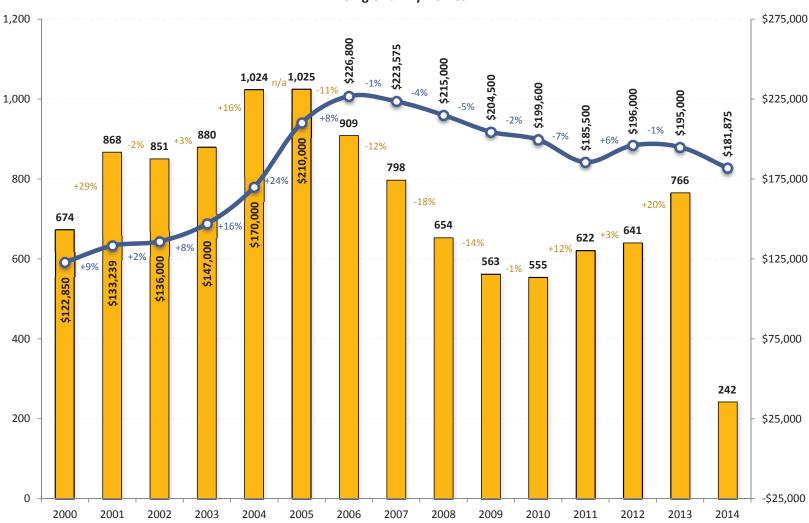

This graph shows a rolling 12 months of the number of home sales in the Harrisonburg and Rockingham County area, as well as the median price of the homes that sold during these time frames. Each data point shows one year's worth of home sales, which eliminates the volatility of evaluating sales figures on a monthly basis. After

over two years of an increasing pace of home sales (orange line) we are now seeing the market starting to taper off -- falling back below annualized pace of 1,000 home sales. In slightly better news, we are starting to see an increase in the median sales price in our local market after over two years of no increases in that metric.

Home Sales & Price Trends

Single Family Homes

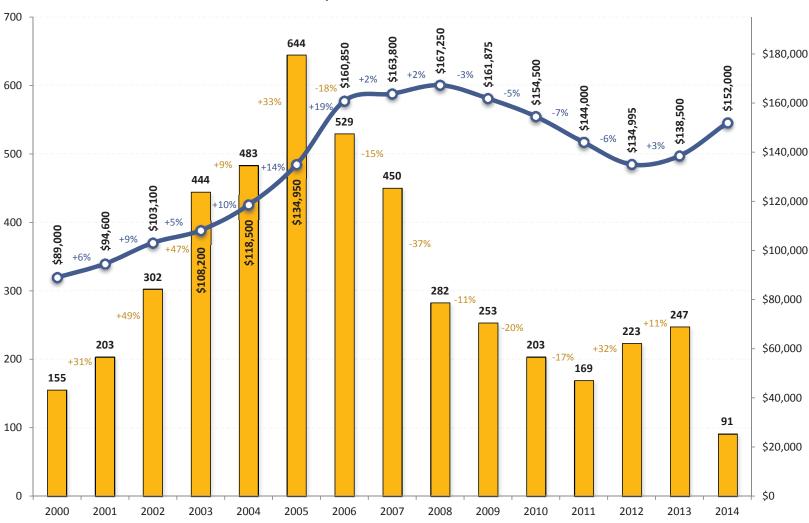

The single family home market in Harrisonburg and the Rockingham County is recovering quite nicely (in most ways) compared to the overall market. Looking at all of 2013, there was a 20% increase in single family home sales as compared to 2012 sales levels. During this time, however, median sales prices actually declined

1%, after having shown a 6% improvement between 2011 and 2012. Year-to-date in 2014, however, we have seen a decline in median sales prices. Hopefully that trend will reverse itself as we get into the Spring and Summer real estate market when there is more sales activity, and at times more competition for properties.

Home Sales & Price Trends

Duplexes, Townhomes & Condos

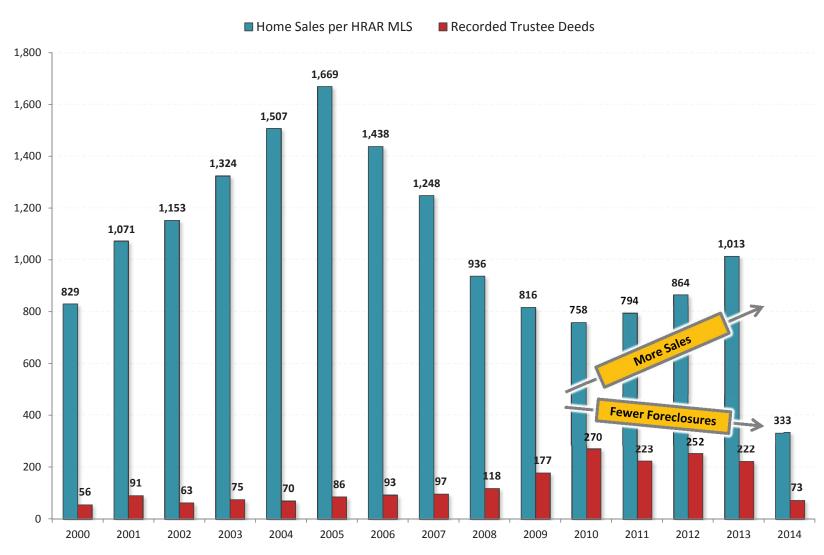

After six years of rapid declines in the pace of townhouse sales in Harrisonburg and Rockingham County, the pace of sales finally rebounded in 2012 with a 32% increase in the pace of sales. This increase continued in 2013, with an 11% increase in the pace of sales, which was accompanied by a 3% increase in the median sales price

of these properties. This analysis shows the compilation of duplex, townhouse and condominiums sales, and it seems that in 2014 we will see an even larger increase in median sales price. These property values fell further than single family homes so this would be a welcome price recovery for such homeowners and sellers.

Home Sales vs. Trustee Sales

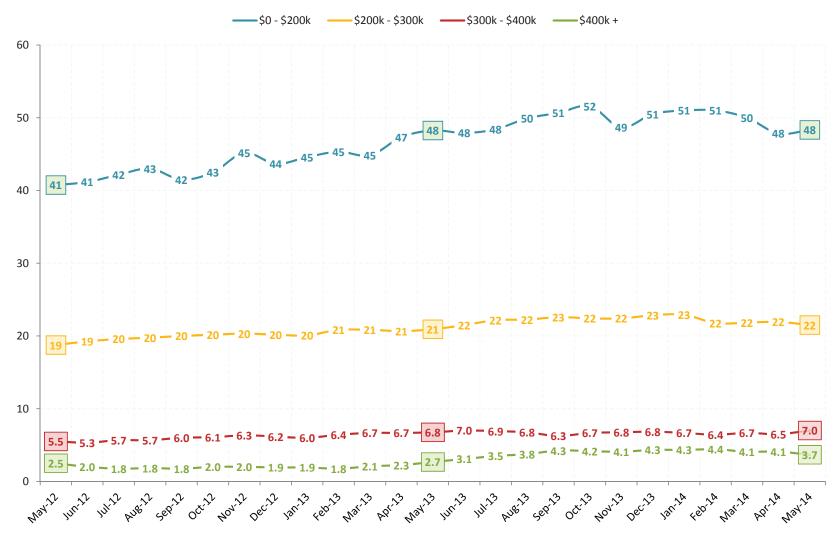

The graph above is a comparison of two imprecise measures -- but the comparison can still be helpful. The blue bars show the number of home sales recorded in the HRAR MLS -- this does not include private sales (without a Realtor), nor new home sales directly from a builder. The red bars show the number of Trustee Deeds. Some

foreclosed properties then show up again as REO properties. The foreclosure rate in 2013 is definitely lower as it was in 2012, as there were 3.4 times as many home sales as foreclosures during 2012 and 4.6 times as many home sales as foreclosures in 2013.

Home Sales by Price Range

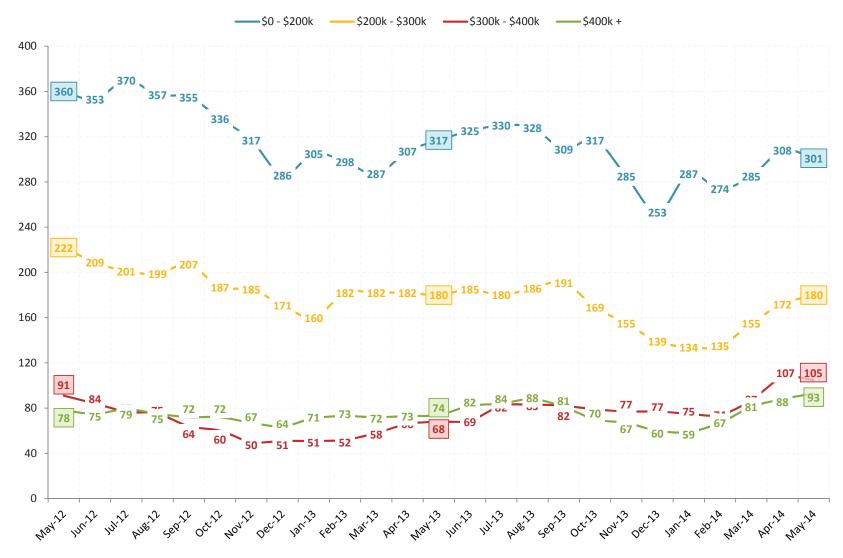

(Average of Past 12 Months)

The pace of home sales in Harrisonburg and Rockingham County varies significantly based on price range. The graph above shows the average number of home sales per month (given a 12-month average) as we have passed through the past two years. Home sales have increased in all price ranges over the past two years, though

some prices ranges have shown more significant growth than others. The fastest recovery seen over the past 12 months has been in \$400K+ homes, which have shown a 37% improvement in the pace of sales. All other price ranges have stayed relatively stable over the past 12 months.

Inventory Levels by Price Range

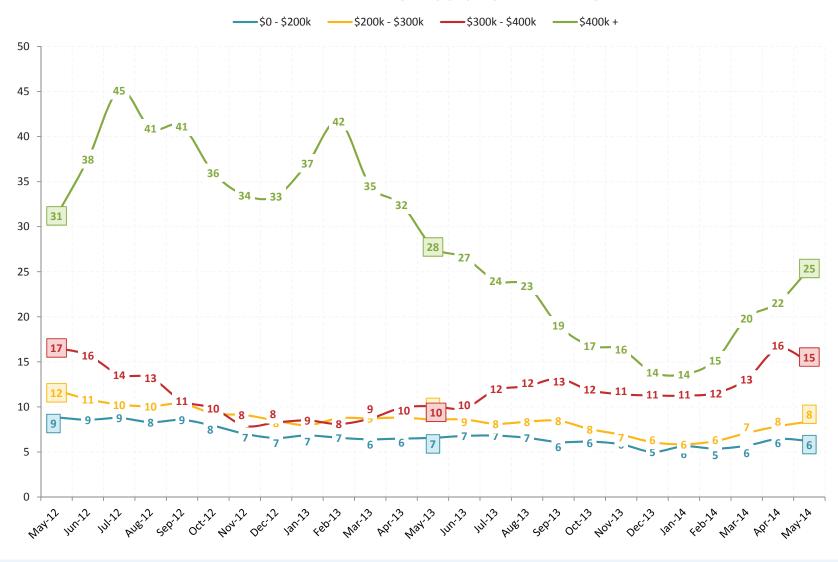

Inventory levels have risen over the past year in the upper price ranges (\$300K+), are stable in the \$200K - \$300K range, and declined slightly under \$200K. We are likely to see increase in listing inventory in all segments of the market as we continue thorugh the Spring and Summer, but thus far, there seems to be the most pressure

on the segments of the market under \$300K. The largest increase in inventory over the past year has been in the \$300K - \$400K market, which has seen a 54% increase in the number of homes for sale!

Months of Housing Supply by Price Range

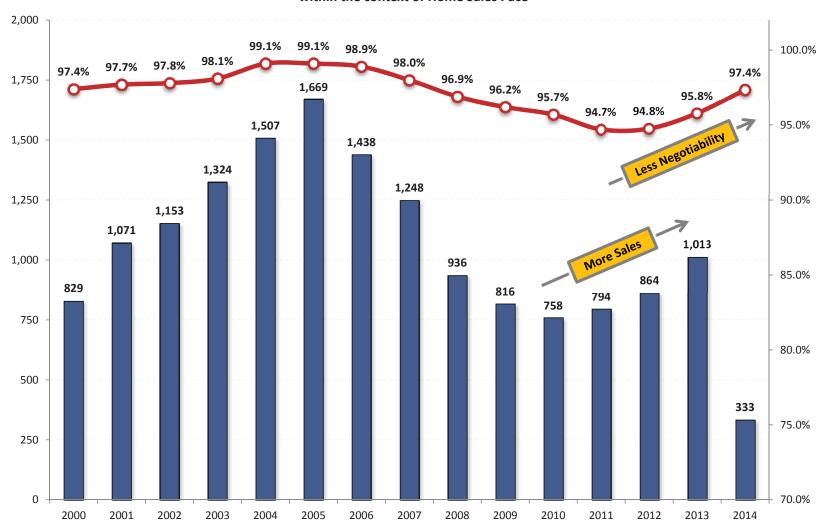

With so many homes on the market (lots of sellers) and so few home sales (not so many buyers), there are very high levels of supply in most price ranges our local real estate market. The graph above illustrates that it would take 25 months to sell all of the homes currently for sale over \$400K if the same number of buyers bought each

month as have been buying (on average) over the past 12 months. Many experts consider a six month supply to be a balance between buyers and sellers, and we have finally reached that balance (now or recently) in the under \$200K, and \$200K - \$300K price range.

List Price to Sales Price Ratio

within the context of Home Sales Pace

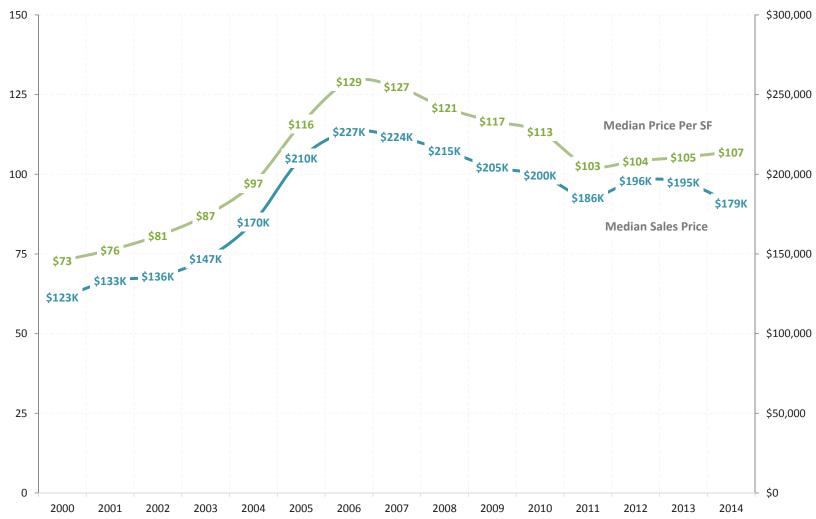

This graph shows the average list price to sales price ratio (red line) over the past 12+ years as compared to the overall pace of home sales. At the peak of the housing boom (2004-2006) sellers were able to obtain an average of 99% of their asking price --- up from an average of 97.4% in 2000 before home sales started escalating.

Of note, we have now returned (in 2014) to that pre-boom level of 97.4% based on sales in the first five months of 2014. As the market continues to recover, we may see this ratio increase even further.

Median Price Per Square Foot Trends

Single Family Homes

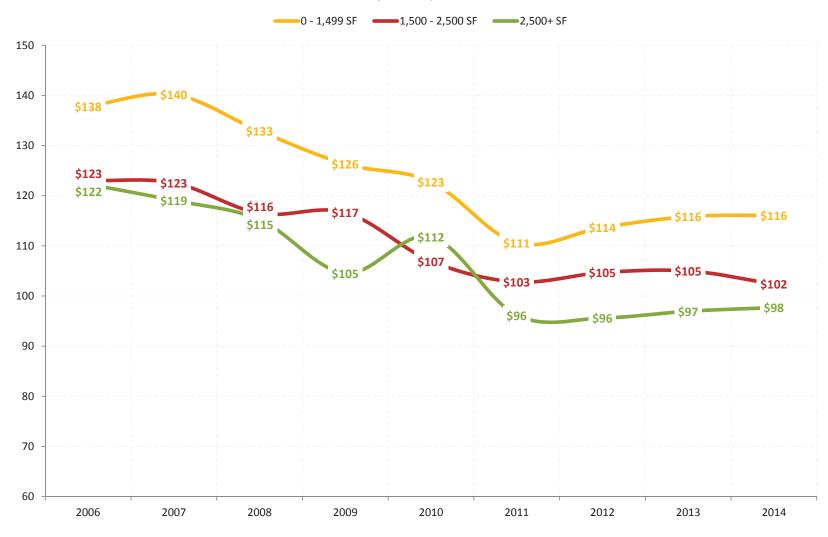

In addition to monitoring home values by overall median sales prices in our market, it can be insightful to examine the median price per square foot of homes that are selling. The graph above shows the median price per square foot of all single family homes sold over the past 10+ years. The value trend captured by this graph is quite

similar to the trend shown in the single family home median sales price during the same time, which validates that assumed set of changes in home values. When focusing in on 2013 and 2014 data, we can see that the median sales price has started to shift downward, though the price per square foot has not yet done so.

Median Price Per Square Foot by Home Size

Single Family Homes

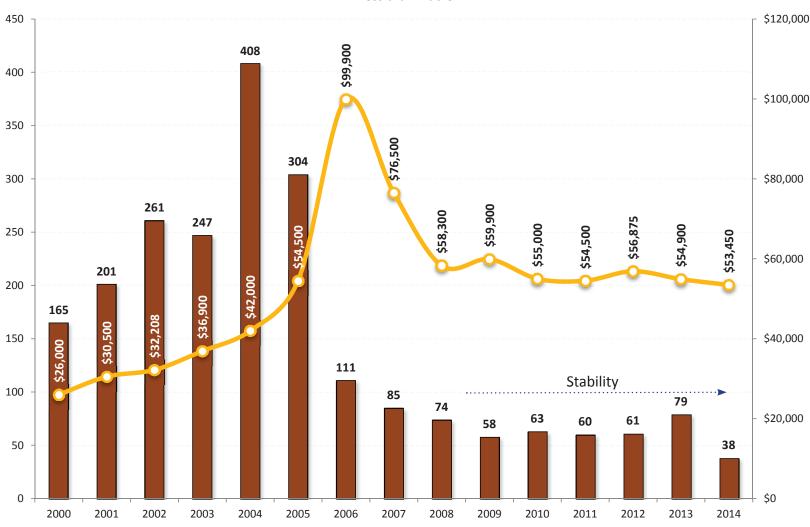

Price per square foot of single family homes certainly varies for many reasons, including the age, location, lot size and structural characteristics of each home sold. However, there are some similarities in homes of a similar size. This graph illustrates that the median price per square foot of larger homes (2500+ SF) is a good bit

lower (\$98/SF) than homes that offer less than 1500 SF (\$116/SF). These values cannot be used as an absolute standard against which the value of any home can be measured, but they can provide some helpful guidance when trying to determine the value of a home.

Lot Sales & Median Prices

less than 1 acre

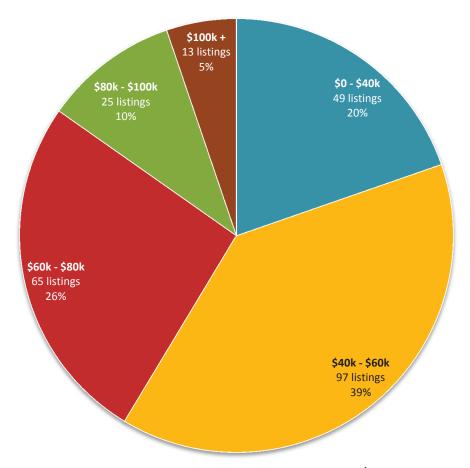

While the pace of sales of lots that are smaller than an acre have plummeted since 2004 (-85% between 2004 and 2010), they may have finally stabilized. We now see that there have been between 58 and 79 lot sales (of less than an acre) for each of the past six years (2008-2013). The median sales price of these lots under one

acre also appears to be stabilizing between \$50,000 and \$60,000. Looking towards 2014, it seems likely that we will see between 75 and 100 sales of this type and size of property. Prices being were they are (just above \$50K) is certainly helping this market to stay steady at this point.

Price Distribution of Active Lot Inventory

less than 1 acre

249 Active Lot Listings; Median List Price: \$56,900

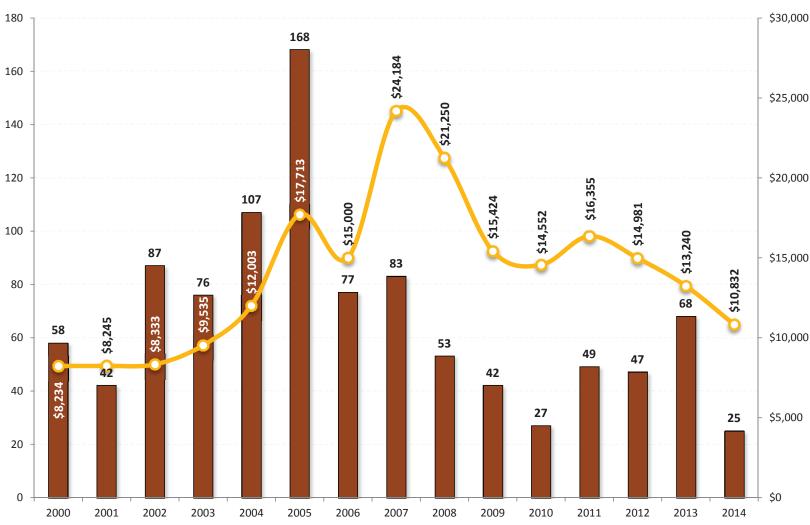

Despite the fact that only 79 lots (of less than an acre) sold in all of 2013, there are a remarkable 249 lots currently for sale. Some sanity exists in this listing market, however, as the median list price of lots for sale (\$57,000) is very similar to the 2013 median sales price of \$54,900. Given last year's 79 lot sales, if no other lots were

listed for sale, it would take 3 years to sell all of the lots currently listed for sale. As you can see above, almost half of the lots currently listed for sale are priced above \$60,000 --- thus many sellers have offering prices higher than recent (2011, 2012, 2013) median sales prices.

Land Sales & Median Price Per Acre

1 acre or more

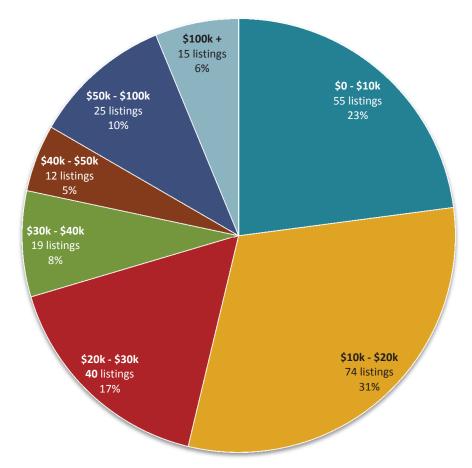

Parcels of land larger than one acre in Harrisonburg or Rockingham County sold quite quickly in 2013 as compared to the past five years. We are still not approaching the number of land sales that we saw in record breaking years such as 2004 and 2005, but 2013 has been a significant improvement with 68 land sales. The median price

per acre of lots over 1 acre in size has fallen quite a bit over the past two years, from \$16,355 per acre to \$13,240. The lower (\$10,832) median price per acre in 2014 may be a result of only a small number of lots selling thus far.

Price/Acre Distribution of Active Land Inventory

1 acre or more

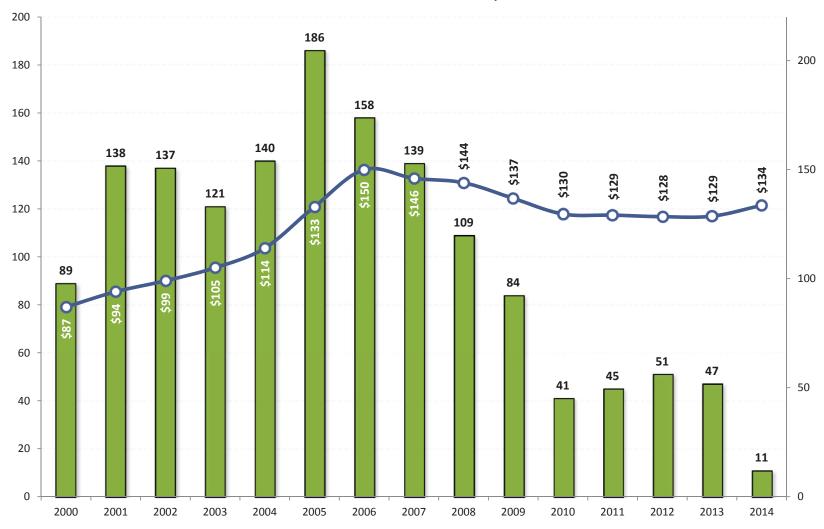

240 Active Land Listing; Median List Price: \$19,115 / Acre

Despite the fact that only 68 parcels of land (of one acre or more) sold in all of 2013, there are a remarkable 240 parcels of land currently for sale. Furthermore, despite the fact that the median sales price of land is hovering around \$13,000 per acre, the median list price of the 240 parcels for sale is currently \$19,115 per acre. Given

last year's 68 land sales, if no other land is listed for sale, it would take 3.5 years to sell all of the parcels of land currently listed for sale. As you can see above, the vast majority of land listed for sale is listed at median prices per acre well above the median sales price per acre.

New Construction Single Family Home Sales Trends

Number of Sales, Median Price Per Square Foot

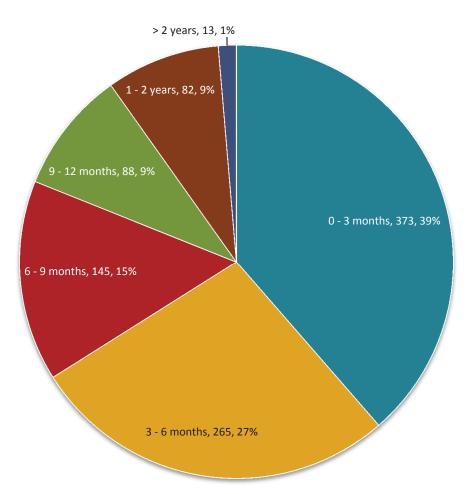

New home builders experienced a slight increase in the pace of new home sales between 2010 and 2012 -- after steady declines since 2005. These increases (41 to 45 to 51) in sales pace, however, still leave plenty of room for improvement. The number of new (single family) home sales declined again in 2013 to 47 sales. The

median price per square foot now seems to have stabilized around \$130/SF last year, where it has been for the past four years. As the inventory of re-sale homes slims down, the sales of new homes should slowly start to increase, though we are certainly not seeing that yet in 2014.

Days on Market Analysis of Sold Properties

Residential Listings Sold in the Past 12 Months

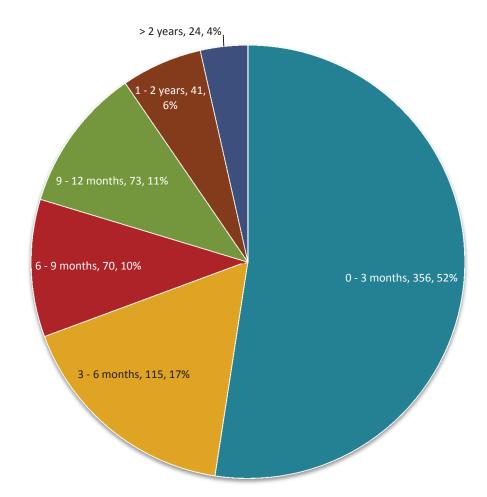

Median Days On Market: 117

Harrisonburg & Rockingham County

Days on Market Analysis of Active Listings

Active Residential Listings

Median Days On Market: 82

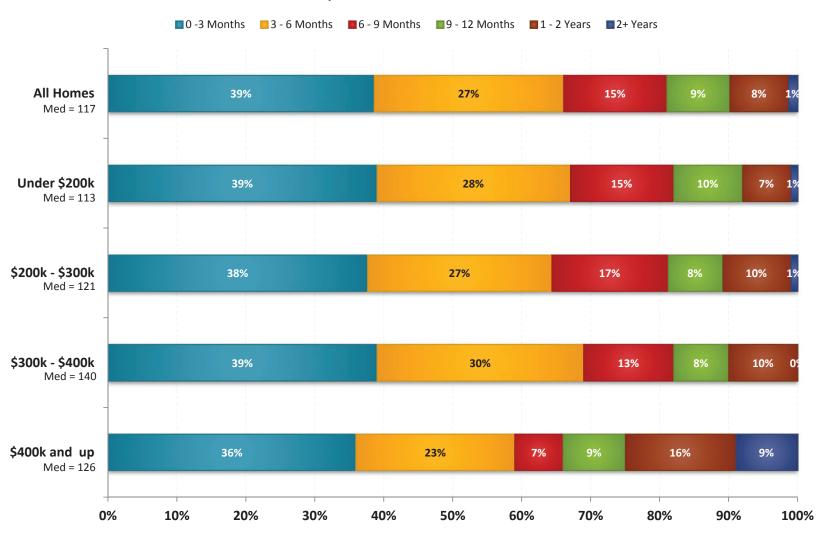

Despite high inventory levels, and low numbers of buyers in the market, the homes that are actually selling are selling rather quickly. In fact, more than 1 out of 3 homes (37%) that sells closes less than 90 days after being listed for sale. Include with that those that close in the next 90 days (28%) and we find that an amazing

65% of homes that sell have closed within six months of first coming on the market. This is not, however accounting for the many homes that never sell -- that linger on the market, or are eventually taken off the market. Of interest -- 52% of the homes currently on the market for sale have been listed in the past three months.

Days on Market Analysis by Price Range

Properties Sold in the Past 12 Months

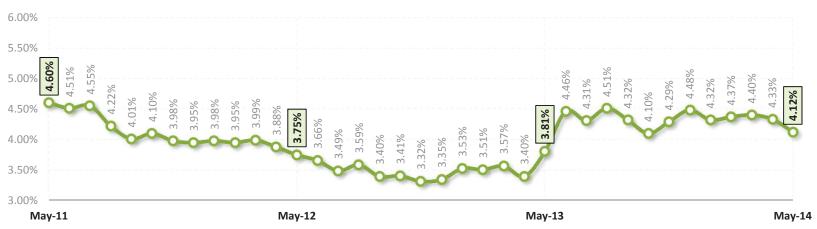

The time that it takes to sell a home in today's market varies based on the price range of the home in question. For example, the median days on market for homes under \$200K is 113 days -- a good bit lower than the median of 140 days for homes between \$300K and \$400K. The difference in median values between price ranges

is also indicative of market challenges for higher priced listings. A full 25% of homes that sold over \$400K in the past year took one year or longer to do so. It is important to consider the price range, location, and many other factors when trying to understand how long it may take to sell your home.

Average 30-Year Fixed Mortgage Interest Rate

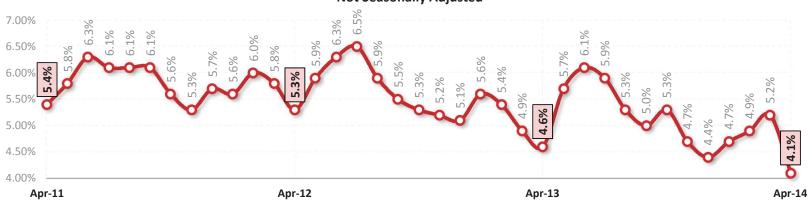

Harrisonburg-Rockingham MSA

Unemployment Rate

As shown in the top graph above, home buyers have seen relatively stable mortgage interest rates over the past nine months. These 30-year fixed rate mortgages have hovered between 4% and 4.5% for many months now. The second graph above illustrates trends in the local unemployment rate -- which increased in January, February and March of 2014, and then dropped to 4.1% in April 2014, the lowest level in the past three years. A stable local job market and relatively low long-term interest rates are certainly helping our local real estate market to stabilize and grow.

Scott P. Rogers, Associate Broker

Scott P. Rogers, has built a successful real estate career around providing valuable market data, insight and analysis to buyers, sellers, investors and developers. From first time home buyers to condo developers, Scott provides exceptional and comprehensive service before, during and after the real estate transaction.

Scott earned a B.A. and M.Ed. from James Madison University, providing him formal education in graphic design, management and counseling -- all of which he leverages on a daily basis to the benefit of his clients.

Scott's graphic design and web development background allows him to create and leverage high caliber technology and marketing solutions.

In 2007, Scott began providing in depth analysis and insight into the local real estate market via his real estate blog, at HarrisonburgHousingToday.com.

Scott serves on the Board of Directors for the Shenandoah Valley Builders Association, Harrisonburg Children's Museum and the James Madison University Alumni Association. Tambien, Scott habla espanol, y puede ayudar gente y familias quien quisiera utilizar un Realtor bilingue. Si usted necesita servicio en espanol, llamar a Scott. Scott puede ayudarle a comprar o vender casas.

In 2010, 2011, 2012 and 2013 Scott was recognized by the Harrisonburg / Rockingham Association of Realtors as being in the top 1% of all area Realtors.
